| Introduction to Interaction Design | Lesson 1: QUIZ | Score: |

Lesson 1 | Self-test

1. ***In your own words***, differentiate interaction design (ID) and human-computer interaction (HCI).

- I think Interaction design is how products is interactive that can help the user to be more efficient and have effective task it understands what the user needs, while human-computer interaction is the actual interaction of the user to the product.

2. ***In your own words***, differentiate interaction design (ID) and user-experience design (UX)

- Interaction design emphasis on the goal that the user and product encounter is entertaining, while user-experience design is the time of interaction of the user and product is only one part of the interface.

3. ***In your own words***, explain the importance of user involvement in interaction design.

- The involvement of the user is important because us the user is the one who is benefits from the interaction design, it gives us positive and negative experience about the product.
